

Turn the new CMS DSF standard into your quality advantage with Vitalic.

Achieving your Star goal starts with closing the Depression Screening and Follow-up gap —and Vitalic is the partner that can get you there. Together, we leverage the DSF-E to improve your quality measurements and patient lives.

The problem every MA Plan is facing.

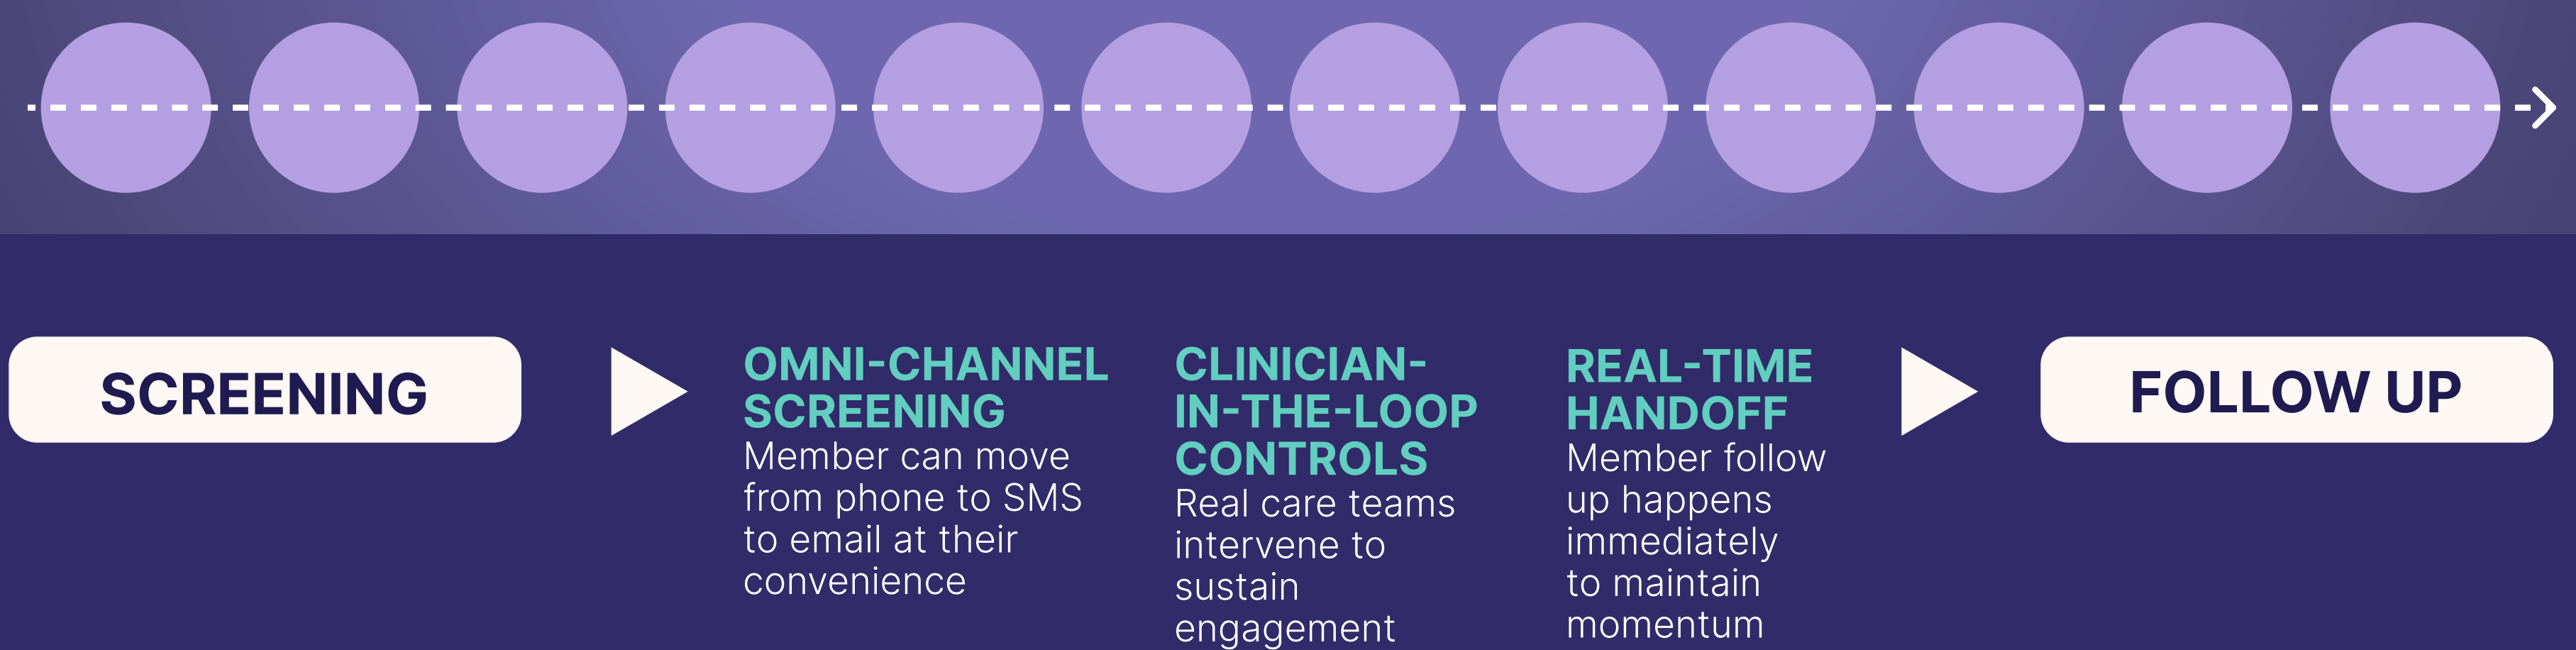

Two disconnected solutions.
Members lost between the workflows.

Vitalic Health: The path to a higher STAR rating.

Vitalic's DSF-E solution combines geriatric-informed AI screening with clinically-based behavioral health follow up.

One integrated workflow that meets members where they are — keeping them on track.

Bonus: Solving the EHR reporting problem.

Most EHRs can't export the depression screening codes CMS requires. Vitalic provides:

- Real-time Visibility**
Vitalic's live reporting dashboard provides screening rates, positive screens, follow-up completion, and 30-day closure metrics
- Standardized Coding**
PHQ-9 and PHQ-2 results exported as standardized LOINC codes for ease of reporting compliance
- EHR Integration & Automation**
ICD codes for diagnosis and follow-up encounters entered into your EMR and aggregated for CMS reporting

Don't let DSF-E be the measure that costs you millions.

Find out more about how Vitalic can protect—and improve—your STAR rating.
